

Title:	A device useful for continuous frying and discharging of deep fat fried urd vada and other similar kind of products
Abstract:	<p>The present invention is design of "A device useful for continuous frying and discharging of deep fat fried vada and similar products". Vada was prepared with urad batter (soaked & ground black gram dhal) using a forming unit in to doughnut shaped vada and directly made to fall in to the said fryer. The said fryer consists of oil trough with equally divided four channels where in which the frying vada moves and these channels are connected integrally in to an endless channel. There is a specially designed small conveyer is provided to remove the fried vada from the fryer. Heating is by LPG source with a burner and controls to regulate the LPG flow. This fryer can be conveniently applied for frying urad vada and similar products continuously and consistently.</p>
