

Production of Sorghum (Jowar) semolina (sooji / rava)

- ✓ Sorghum is a drought-tolerant cereal grain that serves as dietary staple in different countries
- ✓ Sorghum is excellent source of various nutrients and many health-promoting components
- ✓ Utilization of sorghum as food is limited mainly due to lack of innovative processing technologies at commercial scale
- ✓ Hence process is developed to produce the semolina from sorghum with higher yield and different granulation

Sorghum sooji & rava

Project Economics (an estimate)

Capacity of Production	: 6 tons/day
Building Area (Approx. in Sq. Meters)	: 1200
Plant and Machinery (Rs.)	: 22 Lakhs
Total Project Cost	: 53 Lakhs
Cost of Production per Tons	: 35 Thousands
